PROJECT ASSIGNMENT 4

Erdem Yağcı - 2200356063

-Introduction-

In this assignment, I have experienced writing a program with a graphical interface using the java fx library. It is an important programming component and more user friendly. That's why this assignment felt more satisfying and instructive than the previous 3 assignments.

-What I Did Full Or Half ?-

I complete all parts of the assignment except hall scene (I mean if you click on OK button in trailer scene nothing will be happened) and demo recording. Actually I could do it, it wasn't challenging a lot but I hadn't enough time because of final exams schedule.

-What I Did Extra?-

I appended a slider object to the trailer scene that can change the duration of video initially like youtube or other video players.

-In Conclusion-

I learnt something about gui programming design especially in javaFX. And I also learnt that it is harder than normal programming(without grapical interface) because it needs some visual intelligence which I haven't.

Thanks for reading.
